P-05 - Tokenized Shareholder Recordkeeping Charter

Should Galaxy approve the Tokenized Shareholder Recordkeeping Charter for using on-chain vote proof in future pilots?

Voting options: For / Against / Abstain

Demo board recommendation: For

How Voting Works in This Demonstration

An eligible wallet connects to the demo dApp and is checked against the whitelist, blacklist, snapshot voting power, voting window, and prior-vote status. The holder selects one option for each proposal, signs one structured ballot, and a relayer submits the ballot to the local chain. The voter does not pay gas directly in this demo.

The local chain records the vote transaction and weighted tally. Final results and proof are displayed only after the configured voting end timestamp.

Important Demonstration Disclaimer

This sample is not legal proxy material, does not satisfy regulatory solicitation requirements, and must not be presented as an actual shareholder communication. All issuer, meeting, auditor, nominee, and proposal details are fictional or adapted solely for a technical proof of concept.
